BRAND IDENTITY SYSTEM / CONCEPT 1.0

Evidence-led football intelligence

A premium, evidence-led identity proposal for the PitchMind football analytics application.

POSITION Football analysis made clear, inspectable, and grounded in evidence.	**RECOMMENDED MARK** Evidence Path P - a compact P form with a three-point sequence.

Proposed direction for review. The name and existing product color direction are treated as supplied inputs. Trademark, domain, social-handle, and production-font clearance are not claimed.

01 / STRATEGY

A clear promise for complex football

PitchMind helps analysts, coaches, and supporters understand football through time-aligned events, movement context, and explanations that can be traced back to evidence. The visual identity should communicate intelligence without suggesting that an inference is a fact.

Positioning statement

For people who want to understand how a match is played, PitchMind turns football evidence into clear, reviewable explanations. Unlike a generic sports dashboard or an AI chat surface, it keeps the match context, evidence trail, and limits visible.

Audience personas

PERSONA	NEED	BRAND RESPONSE
Analyst / coach	Inspect a mechanism; trace it to the match sequence.	Precise, structured, evidence-linked.
Dedicated supporter	Understand why the game changed in accessible language.	Clear, curious, never patronizing.
Data / product operator	Understand provenance, mappings, and missing coverage.	Transparent, disciplined, dependable.

Values: evidence before certainty; football fluency without needless jargon; clarity over spectacle; disciplined curiosity. No slogan is proposed in this identity concept.

02 / EXPLORATION

Three distinct visual directions

A / EVIDENCE PATH P

A custom P-shaped frame contains three linked evidence points and a directional terminal. Connects PitchMind's initial to following an explanation through a match sequence.

Strength: name linkage, scalability, clear product meaning. Limitation: node/path language is common in analytics; clearance needed.

B / PM RELAY

A shared-stem P/M monogram where the P counter hands off into a rising M stroke. The transition represents movement from observation to interpretation.

Strength: premium monogram potential. Limitation: PM is ambiguous without the name and needs small-size refinement.

C / TACTICAL INDEX

An asymmetrical 3×3 spatial grid with one selected cell and a connecting cut. Suggests positional analysis without drawing a literal pitch.

Strength: strong spatial-analysis cue. Limitation: risks generic dashboard iconography and has weaker name linkage.

Recommendation: A leads as a starting direction, not a legal or consumer-tested winner. It best balances recognition, product semantics, compact UI use, and a coherent evidence motif.

03 / EVALUATION

Weighted concept scorecard

Scores are 1-10 design judgments. Weighted result is sum(score × weight)/100; no score substitutes for customer research or trademark review.

CRITERION	WT	A	B	C
Distinctiveness / originality	20%	7	8	6
Premium perception	15%	8	8	7
Memorability	15%	8	7	6
Football relevance	10%	8	6	9
Scalability / production	15%	9	7	8
Product / channel versatility	10%	9	8	7
Timelessness	10%	8	8	7
International adaptability	5%	9	9	9
WEIGHTED RESULT / 10	**100%**	**8.10**	**7.55**	**7.10**

A is strongest on legibility, scalability and versatility. Its distinctiveness score is intentionally restrained: letterforms, route lines and nodes are established visual conventions, so external similarity checks matter. B is more ownable in principle but has a harder compact-size and name-recognition problem. C signals tactics immediately but risks looking like a generic grid/product icon.

04 / LOGO FAMILY

Evidence Path P

The selected concept combines a custom P silhouette with a short, three-point route. Keep the geometry stable and the route static; the symbol is not an animation cue.

Logo family

Primary lockup: symbol and PitchMind wordmark. Secondary lockups: dark-background and light-background SVGs. Standalone: symbol SVG and monochrome currentColor SVG. Monogram: the P is the monogram; no invented PM ligature is approved. Compact: symbol only for favicon/avatar.

Clear space and sizing

Reserve at least one evidence-node diameter around the logo. Digital symbol: 20 px minimum, with 28-40 px preferred. Digital lockup: 120 px wide minimum, 160 px preferred. Print symbol: 6 mm minimum pending process testing. Embroidery and heat-transfer production require a physical sample and manufacturer review.

Incorrect use

Do not stretch, rotate, add a shield, add unapproved taglines, apply gradients/shadows, recolor nodes independently, or present the mark as an official league/team affiliation.

05 / COLOR

Signal in a composed system

Emerald carries selection and action. It does not replace team colors or encode source confidence.

Midnight - #07131C
RGB 7, 19, 28 / approx. CMYK 97, 92, 89, 3
Primary canvas

Signal Emerald - #4AEFAC
RGB 74, 239, 172 / approx. CMYK 59, -32, 5, 29
Evidence/action accent

Warm Ice - #EDF6F8
RGB 237, 246, 248 / approx. CMYK -1217, -1267, -1278, 93
Primary text / reversed mark

Deep Surface - #0C1E28
RGB 12, 30, 40 / approx. CMYK 95, 88, 84, 5
Panels

Structure Graphite - #243E4C
RGB 36, 62, 76 / approx. CMYK 84, 72, 65, 14
Borders / structure

Deep Green - #147A56
RGB 20, 122, 86 / approx. CMYK 91, 48, 63, 8
Mark on light surfaces

WCAG contrast estimates: emerald/Midnight ≈12.72:1; Warm Ice/Midnight ≈17.10:1; Deep Green/Warm Ice ≈4.85:1. Emerald on white ≈1.48:1, so do not use it for small text or a fine mark on light backgrounds. Verify final values with rendered UI tokens.

Print caveat: CMYK numbers are formula conversions, not a press profile. Confirm output with the printer, stock and garment substrate. The identity must work without metallic ink or gradients.

06 / TYPE + GRAPHICS

Precision without noise

Typography

Use a platform system sans stack: Inter, Avenir Next, Helvetica Neue, Arial, sans-serif. The app uses system-safe fallbacks; do not bundle or embed font files until commercial and redistribution rights are verified. Headings 600-700; reading copy 400-500; metric labels 500-600 with tabular numerals. Display copy uses sentence case and restrained tight tracking.

Graphic language

Build patterns from three evidence nodes and short connecting segments only when they correspond to real content. Use the 4/8/12/16/24/32 px spacing rhythm, generous negative space, clear source/time labels, and one highlighted sequence per view. Charts require axes, units, source/time context, uncertainty, and a non-color distinction.

Photography and icons

If photography is used, prefer honest analysis or training environments and purposeful crops. Avoid invented match scenes, fake club badges, or athlete-performance claims. Icons use simple consistent strokes and semantic labels. Avoid flames, speed stripes, lightning, generic pitch wallpaper, perpetual animation and decorative heatmaps.

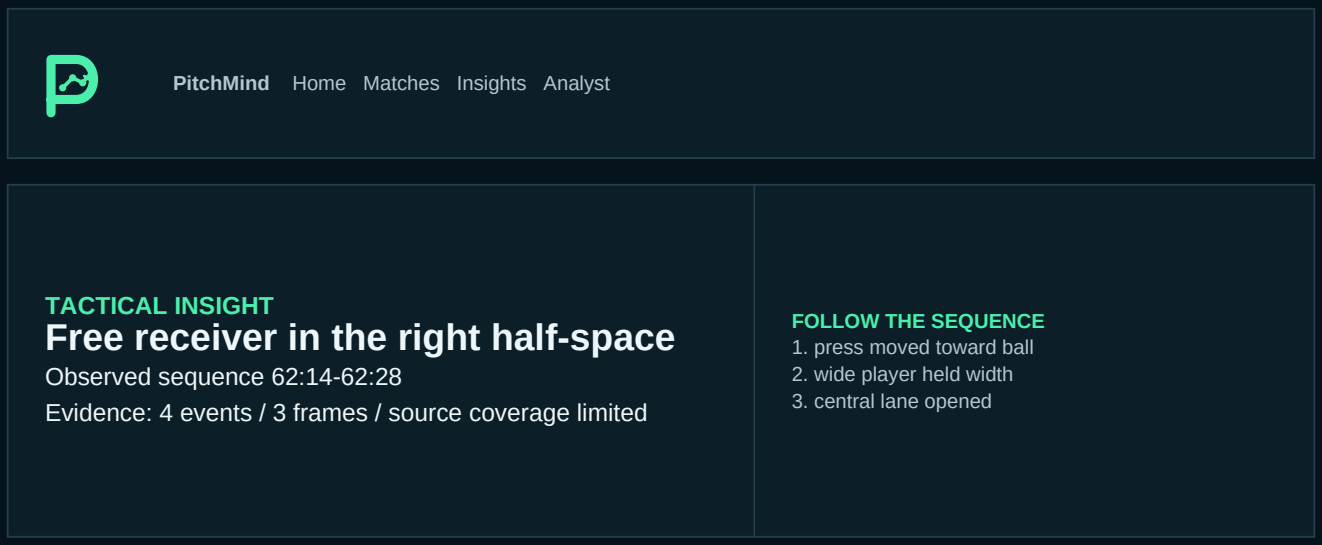
Motion

Keep interface transitions short, interruptible, and within existing product motion guidance. Respect reduced-motion preferences. Keep the identity mark static.

07 / APPLICATIONS

One system across the product

The current product palette and application context anchor the identity. The following layout examples are conceptual guidance except the symbol installed in the header, login surface, and favicon.



Application notes

Header/login: small emerald symbol and stable wordmark. Match view: brand remains in navigation; use the motif for a real evidence sequence, not as decorative chart ink. Analyst: cite facts, match clock, source and limitations next to interpretation. Report: cover lockup, provenance and time context in footer. Social avatar and app icon: symbol alone on Midnight. Optional apparel: only a concept placement, not a production garment specification.

Never imply official league affiliation, licensed live data, or physical product availability. Synthetic EPL-context data needs an explicit label wherever users could infer official live coverage.

08 / VOICE + TRUST

Explain what the evidence can support

Voice principles

Be direct, specific, and curious. Separate observation from interpretation. Name the time window and show the evidence path. State missing coverage plainly. Avoid “AI knows,” “guaranteed,” or “real-time” unless product capabilities and source evidence support the wording.

Example: “The right-side overload created a free receiver” is appropriate only when the available event/position data supports that account. If support is partial, say “The sequence suggests a free receiver on the right; tracking coverage is incomplete.”

Trust rules

The identity is not a source badge or endorsement mark. Brand color must not encode event truth, team identity, or model confidence. The product remains responsible for citations, permissions, privacy, security, accessibility and accurate timestamps.

Slogan

No slogan is proposed in this concept.

09 / HANDOFF + CLEARANCE

Production is a separate decision

Included now

Editable RGB SVG symbol, monochrome symbol, and dark/light SVG lockups; transparent PNG symbol exports at 128, 256, 512 and 1024 px; this guideline PDF and source markdown. Wordmark remains editable SVG text; it is not outlined.

Not supplied or verified

CMYK press-profile masters, spot-color/embroidery files, EPS/AI master, outlined font files, full lockup raster sizes, customer research, domain/social availability, trademark search or legal clearance. Mockup layouts in this guide are illustrative rather than production-ready product specs.

Before external launch

1. Search trademark registries in target regions/classes with qualified counsel. 2. Compare visual, phonetic and conceptual similarity. 3. Check domain, app-store and social handles. 4. Verify font and image licenses. 5. Test symbol reproduction on actual screen sizes and manufacturing processes. 6. Approve copy and accessibility contrast in rendered interfaces.

DECISION REQUEST
Confirm Concept A as the next refinement direction. This is a design proposal, not a declaration of legal or market clearance.

10 / VECTOR MASTER SHEET

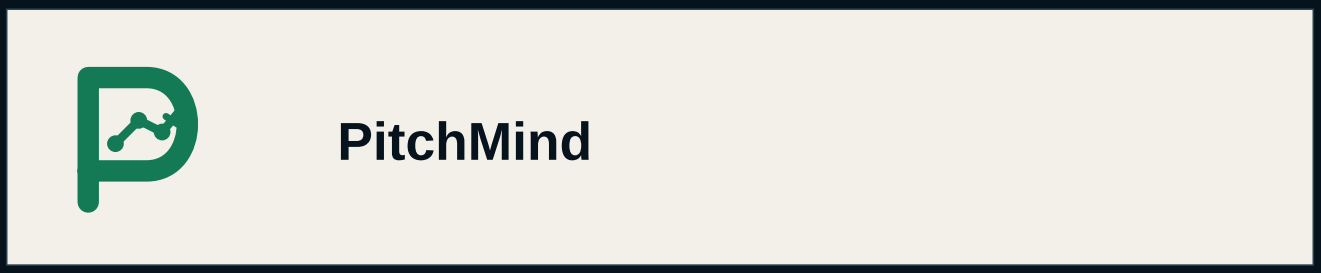
Logo compositions for refinement

Vector examples show the supplied SVG family in intended contrast contexts. Mark and wordmark remain separate editable elements.

DARK BACKGROUND

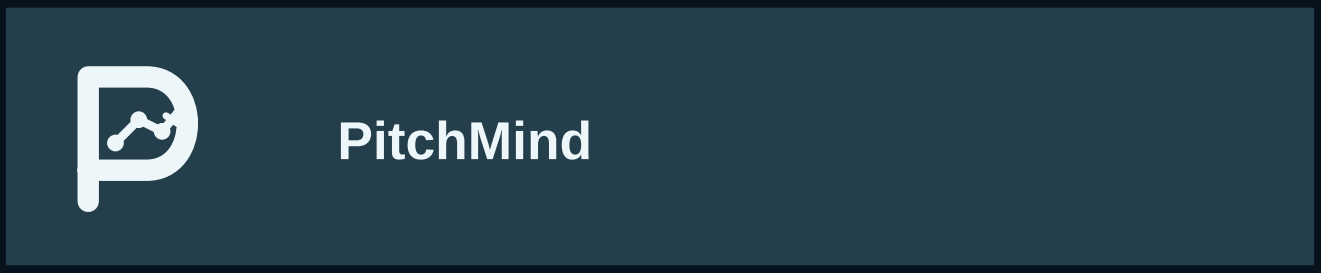
Emerald symbol and warm-white wordmark.

LIGHT BACKGROUND



Deep-green symbol and midnight wordmark.

ONE COLOR / REVERSED



Single-color reversed composition.
